Practitioner's Guide: Interview Dates of Respondents in the Michigan Survey of Consumers

Joshua York
Grand Valley State University

This Version: October 2026
Most Recent Version

Abstract

The public microdata of the Michigan Survey of Consumers (MSC) record only the survey month in which each response appears. The release files archived at the Inter-university Consortium for Political and Social Research (ICPSR) also record the date of each interview. This note summarizes how I recover those dates from 516 monthly ICPSR releases between January 1978 and December 2020, the edits needed to make the releases consistent, and how the dates are matched to the MSC microdata. Of the 277,642 MSC interviews from June 1979 to December 2020, 277,607 (99.99 percent) are matched to an interview date.

Keywords: Michigan Survey of Consumers, ICPSR, interview dates, household expectations

Email: yorkj1@gvsu.edu and Website. If you use these interview dates, please cite my job market paper rather than this guide: York, Joshua. "Do Household Inflation Expectations Respond to Macroeconomic Data Releases?" https://doi.org/10.2139/ssrn.4648451.

1 Overview

Each monthly MSC survey is archived at ICPSR as its own study, with the full set of variables collected during the interviews. The public MSC microdata are a cleaned subset of these files, and the interview date is among the variables left out. Both sources share the same interview identifier, so once the dates are recovered from ICPSR they can be attached to the MSC microdata. The Stata code in this project does so in four stages, run from `_run_all.do`: import the 516 ICPSR studies in `_asdownload` into a common structure (`_raw`), extract the interview date fields (`_clean`), compile and correct them, and merge them onto the MSC microdata. The corrected interview dates and the merged file are saved in `_merge`. Running all four stages from the original ICPSR downloads reproduces these files, with the same data, variable formats and labels. Full details are in `_summary/README.html`.

2 Interview Dates in the ICPSR Files

The ICPSR releases come in four formats (446 Stata, 37 SAS, 21 text and 12 CSV files), and the location of the interview date changes over time. Table 1 lists the five groups of surveys and the variables holding the date in each. Before June 1979 only the week of the month is recorded, so these surveys are assigned a placeholder day and are excluded from the final merged file.

Table 1 – Interview Date Variables in the ICPSR Releases

Group	Surveys	Interview Date Variables
1	January 1978 – May 1979	Week of month only (`v105`; `v6` in January 1978)
2	June 1979 – December 1979; January, March, August 1980	`v105`, `v106`, `v107`
3	February, April – July 1980	`v104`, `v105`, `v106`
4	September 1980 – June 2014	`v6`, `v7`, `v8`
5	July 2014 – December 2020	`iwmo1`, `iwda1`, `iwyr1`

Notes: Variables are listed in the order month, day, year. For group 1, the interview day is set to the start of the recorded week, with explicit dates for February 1978, May 1978 and May 1979, whose first weeks fall in the previous month.

3 Edits to the ICPSR Files

Two kinds of edits are needed. First, the releases label the same questions differently over time, so the code standardizes variable names and labels across all 516 files: it lower-cases names, expands abbreviations in labels (for example *Yr*, *U/D* and *%Prcs*), removes survey codes embedded in pre-1981 labels, and gives common names to the race, interview length and price expectation questions. In the May 2018 release the interview identifier does not match the MSC, so the MSC identifier is assigned to each of its 602 interviews from the sample ID. Second, a small number of interview dates are recorded incorrectly. Table 2 lists these corrections.

Table 2 – Corrections to Recorded Interview Dates

Recorded Value	Correction
Two-digit year	Add 1900
Year 1988 (August 1980 survey); 1960, 1900 or 1950	Set to 1980
Year 1978 (1983 surveys)	Set to 1983
Year 1899	Set to 1998
Year two years from the survey year	Set to the survey year
February 29 – 31 (4 interviews); June 31 (1 interview)	Set to the last day of the month
Day one past the end of the month	Set to the last day of the month
Day greater than 31	Dropped
Interview ID 1200 (October 1990)	Set to 200
Interview ID 8040	Dropped
Interview ID 322 recorded twice (September 1981)	August 25 record dropped

Notes: Corrections are applied in `_scripts/3_compile.do` after the 516 cleaned files are appended and duplicate records are dropped.

4 Matching to the MSC Microdata

The corrected interview dates are merged one-to-one onto the public MSC microdata using the interview identifier, survey year and survey month. Table 3 summarizes the result. Every ICPSR interview date from June 1979 onward matches an MSC interview, and only 35 MSC interviews have no date. These are spread across 25 surveys between July 1979 and December 1988, with at most four in any survey. Each of the 35 has an ICPSR record with the same interview ID, but none has a recorded interview day: the day is coded as not ascertained in 34 and is invalid in one, and for six the month or year is also missing. These records are dropped when the dates are corrected, so the interviews remain in the MSC microdata without an interview date. Table A.1 reports the counts for every survey, along with its ICPSR study number.

Table 3 – Summary of Matching ICPSR Interview Dates to the MSC

	Interviews
ICPSR interview dates, January 1978 – December 2020	294,012
of which week of month only, January 1978 – May 1979	16,405
MSC interviews, June 1979 – December 2020	277,642
Matched to an interview date	277,607
MSC interviews without an interview date	35
ICPSR interview dates without an MSC interview	0

Notes: Matching is on interview ID, survey year and survey month. The final file, `_merge/icpsr_merged - new.dta`, contains the 277,607 matched interviews. The 35 MSC interviews without an interview date each have an ICPSR record with the same ID, but with no recorded interview day.

Appendix: Matching by Survey

Table A.1 – Interview Date Matching by Survey, January 1978 – December 2020

Notes: ICPSR is the number of interview dates recovered from the ICPSR release, MSC is the number of interviews in the public MSC microdata, and Matched is the number of MSC interviews with an interview date. ICPSR No. is the ICPSR study number for each survey, matching the study folders `ICPSR_#####` in `_asdownload`. †Surveys before June 1979 record only the week of the interview and are excluded from the final merged file. Generated by `_scripts/5_match_table.py`.
